Report

- This script is an offline english dictionary which don't require internet connection as it searches word from a json file .

- This script also suggests you a word if u type something wrong .

Limitation

As this script search word from a file , there may be words whose meaning is not their in file. So we can't get their meaning. In this script data file's size is 4 mb. So if we further try to add words in it, file size increases and our execution become slow as we have to load data .

Solution

We can solve above problem by either using oxford API or by storing meaning of words in database. But for above two solutions we required internet connection while executing our code
